

ZEVALIOS

REVENUE & OPERATIONAL PERFORMANCE

Smarter Flow. Stronger Results.

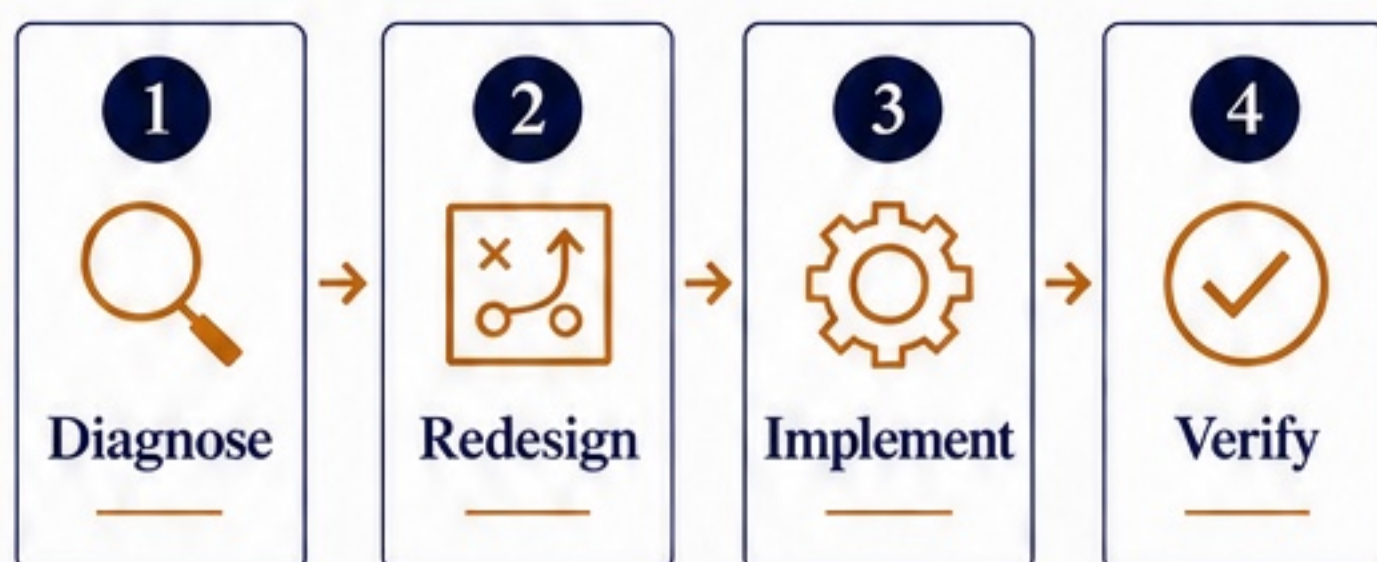

Fix the commercial workflow breaks that slow execution and leak revenue

We help companies find and fix the commercial workflow breaks that create delays, rework, invoice friction, unclear ownership and missed follow-ups. We focus on one material issue at a time, so the engagement remains practical, scoped and measurable.

What we do

- Diagnose one high-impact commercial workflow issue.
- Identify where delays, rework, revenue leakage or unclear ownership are occurring.
- Redesign the processes, controls and handoffs required to resolve it.
- Implement the appropriate tools or templates where useful.
- Verify that the redesigned workflow works in practice.

How we work

Why Zevalios

- Founder-led, commercially minded and legally rigorous.
- Execution-focused, practical and measurable.
- Fixed scope, fixed timeline and fixed price.
- Designed to reduce buying risk and avoid open-ended consulting.
- Built for companies that need working controls, not another slide deck.

Typical outcomes

- Improved cash conversion and revenue realisation
- Faster workflows and stronger follow-ups
- Clearer accountability and ownership
- Better management visibility
- Fewer errors, disputes and rework
- Stronger invoicing discipline

Initial engagement

Commercial Operations Diagnostic

A fixed-scope, fixed-timeline and fixed-price engagement focused on one high-impact issue. The outcome is a clear diagnosis, a prioritised action plan and practical next steps - without a long or open-ended consulting commitment.

Founder-led. Proven impact.

Founder-led by Yashwantt Ramnarain. Corporate and commercial legal background with in-house and private-practice experience. Translates contractual obligations, governance, risk and commercial commitments into workable operating systems, controls, registers, checklists and follow-up methods. Internal impact: a recurring task reduced from two people over four days to one person in half a day through redesigned workflow, semi-automation and controls.

If your business has one recurring commercial workflow issue worth fixing, let us assess whether it warrants a focused diagnostic.
